

APM HEXSEAL

Sealing Specialists

APM HEXSEAL was founded in 1947 with the mission to develop and manufacture environmental sealing solutions to protect and prolong the life of electromechanical switches and circuit breakers in hostile environmental conditions around the globe. This focused effort resulted in the development of an extensive line of standard silicone sealing boots that are compatible with the vast majority of switches, breakers, encoders, potentiometers and rotary devices used throughout the world today.

Complimentary sealing products were soon developed and patented, including a complete line of reusable, self-sealing fasteners, and silicone colorizing incandescent lamp filters that transmit colors for instrument panels and lighted pushbutton switches.

Drawing upon our experience with precision transfer and compression molding using a wide range of elastomers, rubber-to-metal bonding and coating treatments, APM Hexseal's Custom Design Department offers an efficient method to develop your custom sealing needs,

Self-Sealing Hardware

- ◆ SEELSKREW® Self-Sealing Screws
- ◆ SEELBOLT® Self-Sealing Bolts
- ◆ SEELNUT® Molded Self-Sealing Nuts
- ◆ SEELOC® Molded Sealing Washers

from concept all the way to production.

Sealing Boots & Bushings

- ◆ Switch and Potentiometer Boots
- ◆ Circuit Breaker Boots
- ◆ Specialty Bushing Seals
- ◆ Custom Elastomeric Sealing Solutions

“APM Hexseal has a solution looking for your problem.”

ISO 9001:2015 Registered

(800) 498-9034

APM Hexseal's High-Pressure Self-Sealing Fasteners

APM Hexseal pioneered the first patented self-sealing fasteners, now known as our **Seelskrews®** and **Seelbolts®**. These fasteners provide a reliable, reusable seal against dust, air, water, lubricants, and other contaminants. For enhanced stability, we offer locking features like self-locking pellets, strips, and patches. Customization options include specialty thread-forming, tamper-resistant drives, thread captivation, plus various paints and finishes.

Need specific thread sizes or O-ring elastomers? Contact us to explore the possibilities!

MATERIAL SPECIFICATIONS
For APM Hexseal® Standard Silicone Seelskrews® & Seelbolts®

Screw/Bolt Material: 18/8 Stainless Steel, passivated (other materials available)
Thread Class: Imperial— Class 2A ▲; Metric— Class 6g
O-Ring Elastomer: Silicone conforms to A-A-59588, Class 2, GR60 or GR70, Red ♦
Temperature Range: -80° F to +425° F (-62° C to +219° C)
Resistant to: Splash, salt spray, sunlight, ozone, weather, fungus, dust, and most acids and lubricating oils.
Shelf Life: Excess of 25 years.
Enclosure Protection: UL & ULC Recognized Components conform to UL Standard 508A (rated to satisfy IEC IP66 / IP68 ★)

▲ Standard for stock screws and bolts.
 ♦ Alternative o-ring elastomers are available by request. (See table on page 7 for options.)
 ★ A dual IP code rating indicates that both ratings apply.

Contact us for a complete list of our UL & ULC Recognized Components and ratings.

APM Hexseal's High-Pressure Self-Sealing Nuts

APM Hexseal's **Seelnuts®** feature high-quality rubber molded directly into the nut, with integrated threads that create a reliable seal along both the threads and contact surface—eliminating the need for gaskets or sealing compounds. They install like standard nuts and work with ordinary screws, bolts, and studs, making them a quick, effective sealing solution. Seelnuts are reusable, maintaining their seal when retorqued, and come in a range of thread sizes and various elastomer options. For high-vibration applications, they can also be supplied with self-locking pellets.

Ordering Instructions for Products with Type Codes – Seelskrews®, Seelbolts® & Seelnuts®

The following information is **required** in order for our Sales Team to process any kind of Purchase Order or Request for Quote:

- 1) Indicate the desired **Type Code** (Type Codes are short series' of letters that can be found in corresponding parts tables)
- 2) Specify the desired **Thread Size** as listed in the parts table
- 3) Specify the **Length**, if applicable
- 4) Specify the desired **O-Ring Material**, if applicable (Please see **Elastomer Options for APM Hexseal® O-Rings** on page 4)

Any additions, such as alternate materials, finish options and locking features, should be discussed with a Sales Associate at the time of order.

This catalog is a **partial** representation of APM Hexseal's many product lines. Please contact us directly for additional product options, as well as to request a Quote or place an Order.

APM Hexseal Boots for Toggle, Pushbutton & Rotary Switches

Any unsealed electrical devices mounted to a control panel or piece of electrical equipment can fall victim to the impacts of hostile environmental factors if not properly protected. In this context, "environmental" is a very broad term, encompassing any number of possible factors, including weather conditions like rain, snow or prolonged wind and sun exposure, pressure changes from submersion in fluids or changes in altitude, contaminants such as water, ice, salt, air, dust, dirt, grease, chemicals, and even spilled beverages. APM Hexseal's Sealing Boots are designed to protect the vulnerable areas of a device, and create a seal against the mounting panel, providing strong protection for the device itself, and for the overall function of the system.

Ensure the safety, reliability and function of your critical systems...

MATERIAL SPECIFICATIONS

For APM Hexseal® Standard Silicone Toggle, Pushbutton & Rotary Boots

Elastomer: Silicone † conforms to A-A-59588, Class 3A, GR50, Gray ‡

Mounting Nut: Brass, Nickel Plated

Temperature Range: -103° F to +400° F (-75° C to +204° C)

Resistant to: Splash, salt spray, sunlight, ozone, weather, fungus, dust, and most acids and lubricating oils.

Shelf Life: Excess of 25 years.

Enclosure Protection: UL & ULC Recognized Components conform to UL Standard 508A (rated to satisfy IEC IP66 / IP68 •)

- † Alternative elastomers options are available by request. (See table on page 7 for options.)
- ‡ Additional durometer and color options available. Please contact us for details.
- A dual IP code rating indicates that both ratings apply.

Contact us for a complete list of our UL & ULC Recognized Components and ratings.

Boot Installation Note

For proper boot installation, 3 to 4 switch threads should extend above the mounting surface.

APM Hexseal Bushing Seals For Switch Panel Cut-Outs

Bushing Seals pack all the sealing power of a boot, but focus on the mounting hole as opposed to the switch itself. Installed before a switch locking nut, the bushing seal fits snugly against the mounting panel, sealing the mounting hole from any possible intrusion. Bushing Seals are small, inconspicuous and perfect for already sealed toggle, push button and rotary switches.

Bushing Seals

APM Hexseal Boots for Circuit Breakers & Rocker Switches

Circuit breakers perform a very valuable role in all sorts of control systems, protecting equipment from short circuits and electrical overloads. APM Hexseal's lever-actuated circuit breaker boots are designed to protect these critical devices, extending breaker life-spans and in turn helping to ensure long-term security of the system as a whole. Molded from APM Hexseal's transparent silicone RUBRGLAS[®], which is specially formulated to maintain clarity and prevent yellowing over time, these boots allow for easy device operation and status recognition while maintaining APM Hexseal's exceptional environmental protection from weather exposure, wash downs, salt water, lubricants, solvents, dust, dirt, grease and any number of other environmental elements that could potentially threaten electrical components. Our two distinct boot styles are Back-of-Panel, secured behind the breaker mounting panel, and Front-of-Panel, mounted to the outside of a panel using a sturdy metal frame. Both styles are secured using APM Hexseal's self-sealing Seelskrews.

Much like our Circuit Breaker Boots, APM Hexseal's Rocker Boots are often molded from transparent silicone RUBRGLAS[®] which makes for easy viewing of the switch position. The majority of our Rocker Boots do not include an insert or frame, and are designed to install on the switch prior to the switch installation.

MATERIAL SPECIFICATIONS

For APM Hexseal[®] Standard Silicone Rocker and Lever-Actuated Circuit Breaker Boots

Elastomer: APM HEXSEAL RUBRGLAS[®] (transparent Silicone) conforms to A-A-59588, Class 3A, GR50 †
Frame (Front-of-Panel Mounted Only): Low Carbon Steel ‡ with Zinc-Chromate Plating •
Temperature Range: -103° F to +400° F (-75° C to +204° C)
Resistant to: Splash, salt spray, sunlight, ozone, weather, fungus, dust, and most acids and lubricating oils.
Shelf Life: Excess of 25 years.
Enclosure Protection: UL & ULC Recognized Components conform to UL Standard 508A (Rocker Boots— Rated to satisfy IEC IP55; Front-of-Panel Mounted— Rated to satisfy IEC IP66 / IP68 ◊; Back-of-Panel Mounted— Rated to satisfy IEC IP66 / IP68 ◊)

† Durometer options available. Please contact us for details.
 ‡ Frames are also available in Stainless Steel for extremely aggressive environments.
 • Contact us for details on our standard 3-step frame finish.
 ◊ A dual IP code rating indicates that both ratings apply.

Contact us for a complete list of our UL & ULC Recognized Components and ratings.

IMPROVED APM Hexseal Air-Tight Sealing Washers

APM Hexseal's **Seeloc® Washers** combine molded silicone rubber with custom-formed stainless steel for a simple, high-performance sealing solution. Designed for use with standard screws, bolts, or studs, they create a 360° barrier against liquids, dust, oils, and contaminants—ideal for washdowns, spray-heavy environments, and harsh conditions. The silicone's continuous ridge compresses for a complete, high-pressure seal, including under the fastener head and along the shank. Versatile enough for standard holes, oversized openings, or irregular slots, Seeloc Washers are also reusable, making them perfect for applications requiring periodic maintenance or adjustments.

MATERIAL SPECIFICATIONS

For APM Hexseal® Standard Silicone Seeloc® Washers

Washer Material: 18/8 Stainless Steel
Elastomer: Silicone † conforms to A-A-59588, Class 3A, GR50, Green ‡
Temperature Range: -103° F to +400° F (-75° C to +204° C)
Pressure Range: Up to 100 psig internal.
Resistant to: Splash, salt spray, sunlight, ozone, weather, fungus, dust, and most acids and lubricating oils.
Shelf Life: Excess of 25 years.
Agency Recognition: UL & ULC Recognized Components conform to UL Standard 508A (rated to satisfy IEC IP66 / IP68 ◊)

† Alternative materials are available. Consult Elastomer Options table below.
 ‡ Standard color for Metric Seeloc Washers is red. Alternative colors are available by special order.
 ◊ A dual IP code rating indicates that both ratings apply.

APM Hexseal's Available Elastomers

Cautionary Note: These tables are to be used as a **GUIDE ONLY**. The information provided does not take into account the possible variations that can, and do, exist from one application to another, and thus cannot be relied upon as definite. APM Hexseal strongly recommends that the material you select be rigorously tested in the actual application in order to independently verify that the material is well suited for your particular installation or use.

Suitability of APM Hexseal® Products to Customer Application

The information contained in APM Hexseal literature, website, drawings, etc., is offered in good faith and is believed to be accurate. Since APM Hexseal cannot foresee or control the varied conditions under which this information and/or APM Hexseal products may be used, APM Hexseal does not guarantee the applicability of this information, or the suitability of APM Hexseal products. Customers are expected to perform their own evaluation to determine the suitability of APM Hexseal products for their specific purposes and applications.

SEALING SOCKET HEAD CAP SCREWS

HIGH-PERFORMANCE SEALING IN A STREAMLINED DESIGN

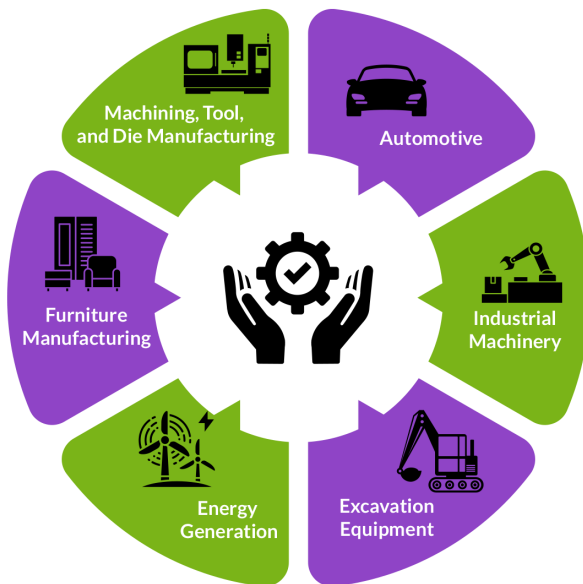

APM Hexseal's Socket Head Cap Screws combine sleek design with superior sealing performance. Featuring a barrel-shaped head with a recessed hex drive, they're ideal for tight spaces and applications where aesthetics matter.

Our custom groove and integrated O-ring creates a reliable seal, protecting even the most sensitive systems. Available in a variety of O-ring materials, these screws deliver the high-performance seal APM Hexseal is known for, all with a clean, streamlined finish.

APPLICATIONS

APM Hexseal's sealing socket head cap screws are used in various applications requiring a secure and leakproof connection. Common applications include:

ADVANTAGES

Sealing socket head cap screws offer several advantages in various applications, especially where environmental sealing and protection are crucial. Key benefits include:

-  Reduces the total number of screws needed for an application, resulting in lower component costs
-  Lowers the number of holes needed to be drilled and tapped, reducing manufacturing costs
-  Reduces overall product weight due to lower component count
-  Suitable for use in small or tight spaces
-  Provides a cleaner appearance for the finished product
-  Delivers unmatched strength, economics, and reliability
